

Section 4.3 Solar Energy Systems

Utility-scale solar energy systems may be permitted following conditional-use approval by the Planning Board. The Board must hold a public hearing before granting conditional-use approval.

All solar energy equipment shall maintain a 100-foot setback from residential property lines and public roads.

Section 7.8 Application and Decommissioning

An application for a solar energy system shall include a site plan, equipment specifications, and an operations narrative. The applicant shall submit a decommissioning plan describing removal of equipment and restoration of disturbed land.

Before final approval, the Planning Board may require financial security in the form of a bond or surety. A traffic study and environmental study may be required when site conditions warrant additional review.
